

Assignment – 1.1

Task-1

1. Draw a labeled diagram of a desktop PC, clearly marking the motherboard, CPU, RAM, GPU, and both HDD and SSD storage components.

Task-2

Create a comparison table showing the main differences between HDD and SSD storage in terms of speed, durability, and typical use cases

Features	HDD	SSD
FULL FORM	Hard Disk Drives	Solid State Drives
SPEED	Slower than SSD	Faster
Power Consumption	More Power Consumption	Less Power Consumption
Noise	Make some noise	Silent
Works	With a Moving Part Magnetic Disk	Flash Drives chips
Used	Backups, Budget PC , Higher Level of Storage	Gaming , High Speed and More Durable

Task-3

Write a short explanation (2-3 sentences each) describing the role of the CPU, RAM, and GPU in running a game like PUBG or Free Fire on a PC

CPU: It is Brain of Computer, it handles all the game Logic , Calculations, Player Movement etc. So CPU handles or manages the Control of a Game.

RAM : Random access Memory. It stores Temporary Memory so in particular High Speed Game requires Good amount of RAM . It gives Some Processing Storage to the Game so it can run smoothly, and if Ram Size is not enough than it can't play Games or it Lags.

GPU : Graphics Processing Unit. It handles all the animations , picture quality of game, how character looks. How smooth the game plays with higher quality of Graphics.

Task -4

Imagine you want to upgrade your PC to run the latest version of FIFA smoothly. List which hardware components you would consider upgrading and explain why for each.

- ➡ For a FIFA Game the Components that can be Upgrade are GPU, RAM, CPU, SSD
- ➡ The Most important is GPU
- ➡ I would Like to upgrade GPU because it renders Graphics , Provides Smooth Gameplay and Higher fps.
- ➡ SSD can load the Application Faster, Boost Windows boot
