

Assignment – 1.2

Day 2: Motherboard and CPU Theory (30 min): Types of motherboards and CPU socket Compatibility Functions of the CPU and chipset.

Task-1

1. Draw a labeled diagram of an ATX motherboard and mark atleast 8 different slots and ports (such as RAM slots, PCIe slots, SATA ports, USB headers, CPU socket, power connector)

Task 2

Research and list 3 popular CPU socket types (for example: LGA1151, AM4, LGA1200) and name one compatible CPU model for each

CPU SOCKET	MANUFACTURE	CPU MODEL
LGA1151	INTEL	Core i7-9700K
AM4	AMD	Ryzen 5 5600
LGA1200	INTEL	Core i510400

Task - 3

3. Explain In your own words the primary functions of the CPU and the chipset on a motherboard, and describe how they work together when you open a music app like Spotify.

CPU: Main Processor, it executes the instructions and control the main logic and does the processing.

Chipset: It is a Group of Motherboard Controller, and help CPU to communicate with Hardware and I/O devices.

So both are needed for opening Spotify because CPU will execute instructions and Chipset will help to communicate with RAM, Storage and Audio Devices.

Task 4: Real Motherboard Photo
